

Detect Badness In Dashboards

Name: Omer Abid

Erp: 14922

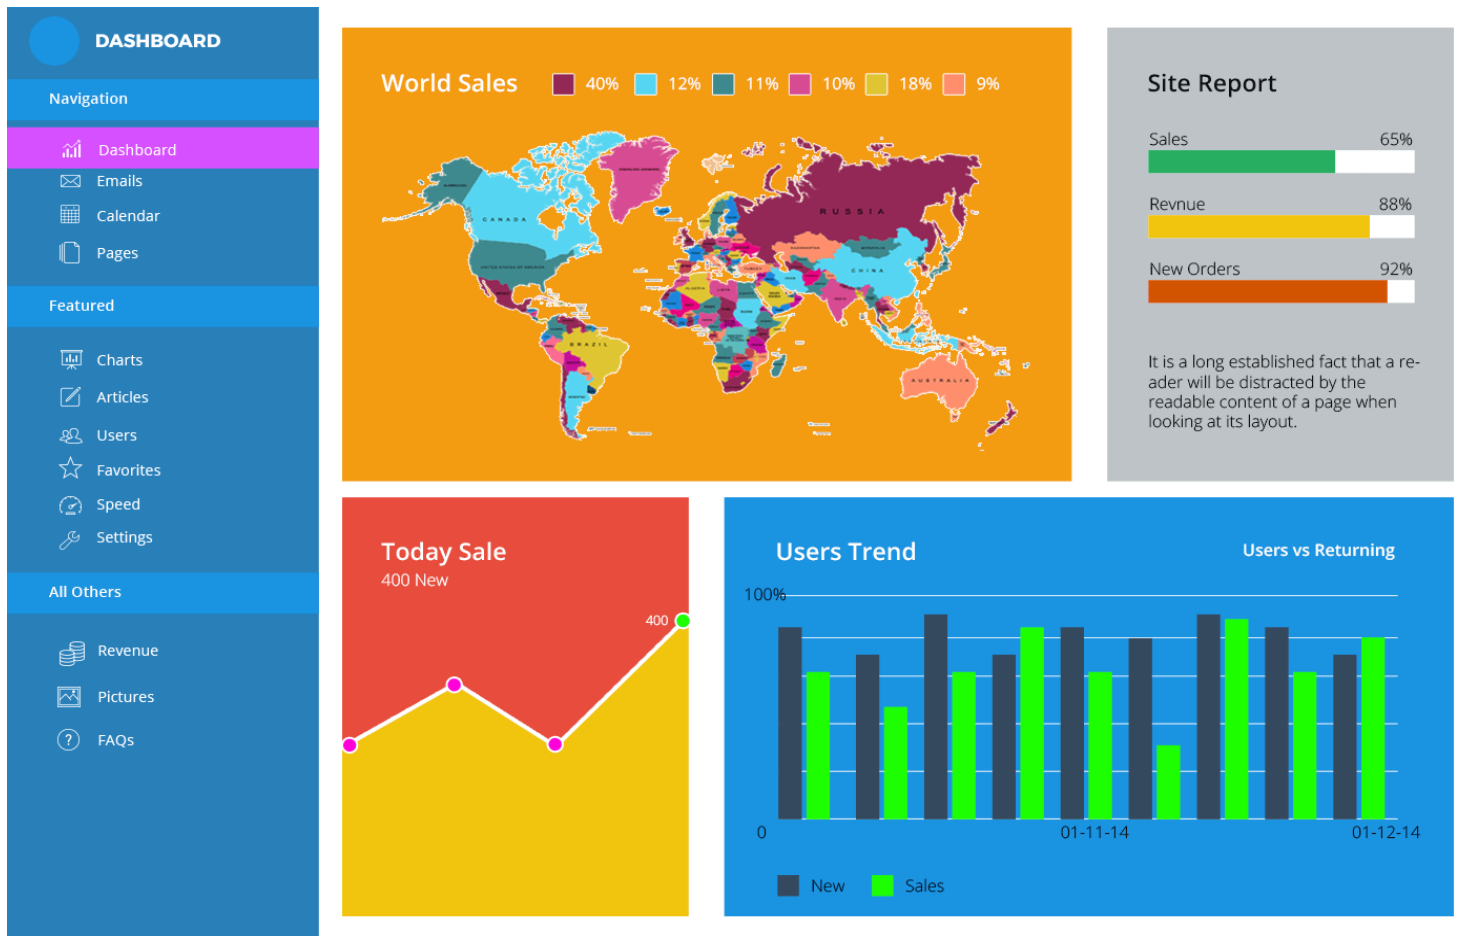

Dashboards:

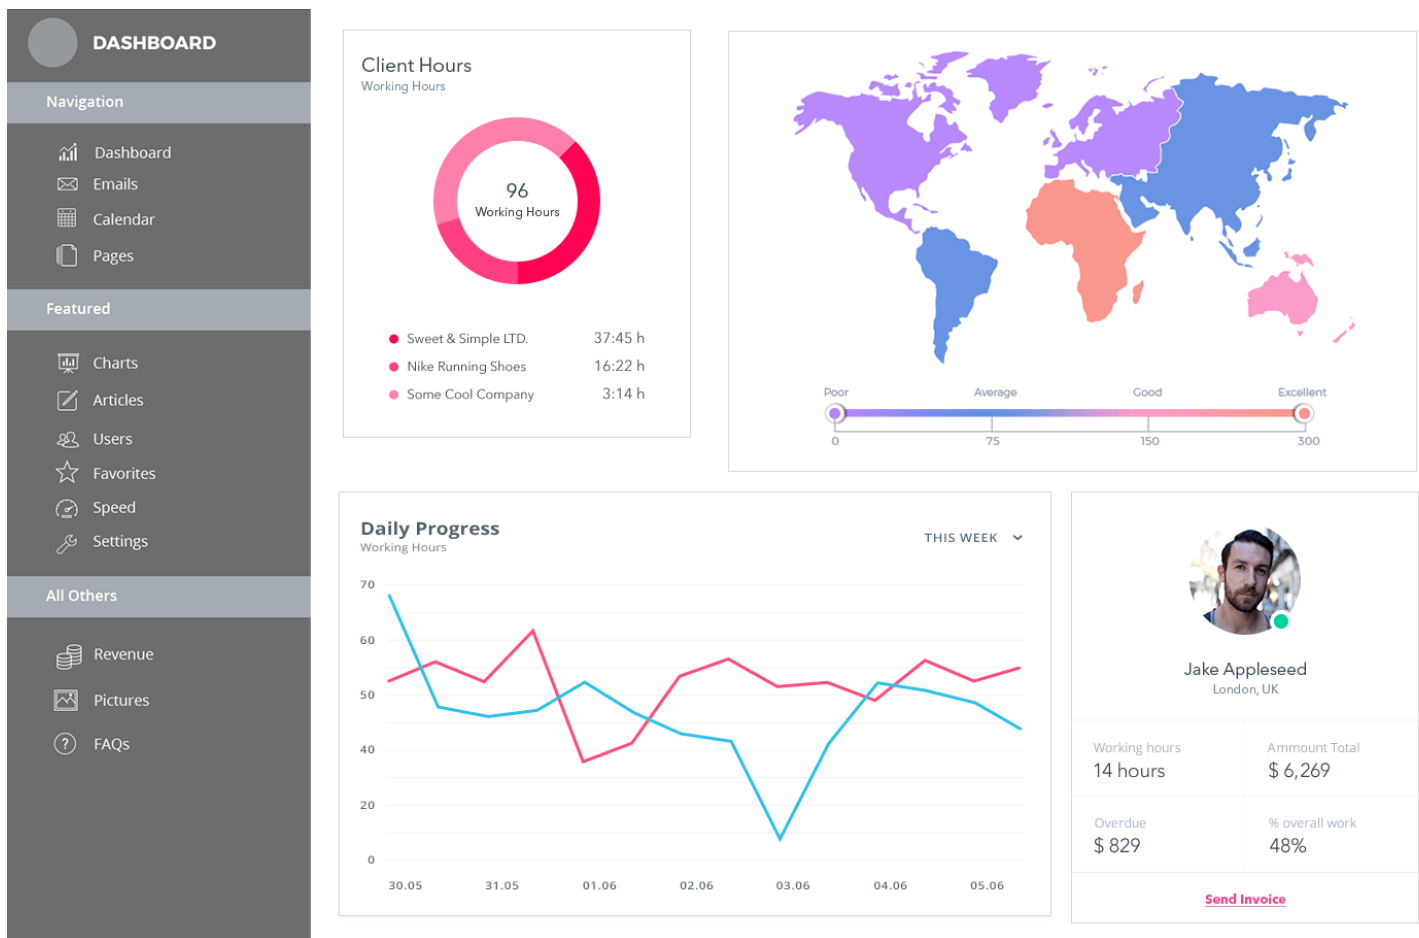

For this dashboard this looks like an example of operational dashboard but still it looks cluttered. Another thing is that the color scheme sorts of forces the eye focus of the user to jump all over the dashboard unlike the recommended way which states to put things of focus starting from the left top. The overall color scheme also does not look consistent.

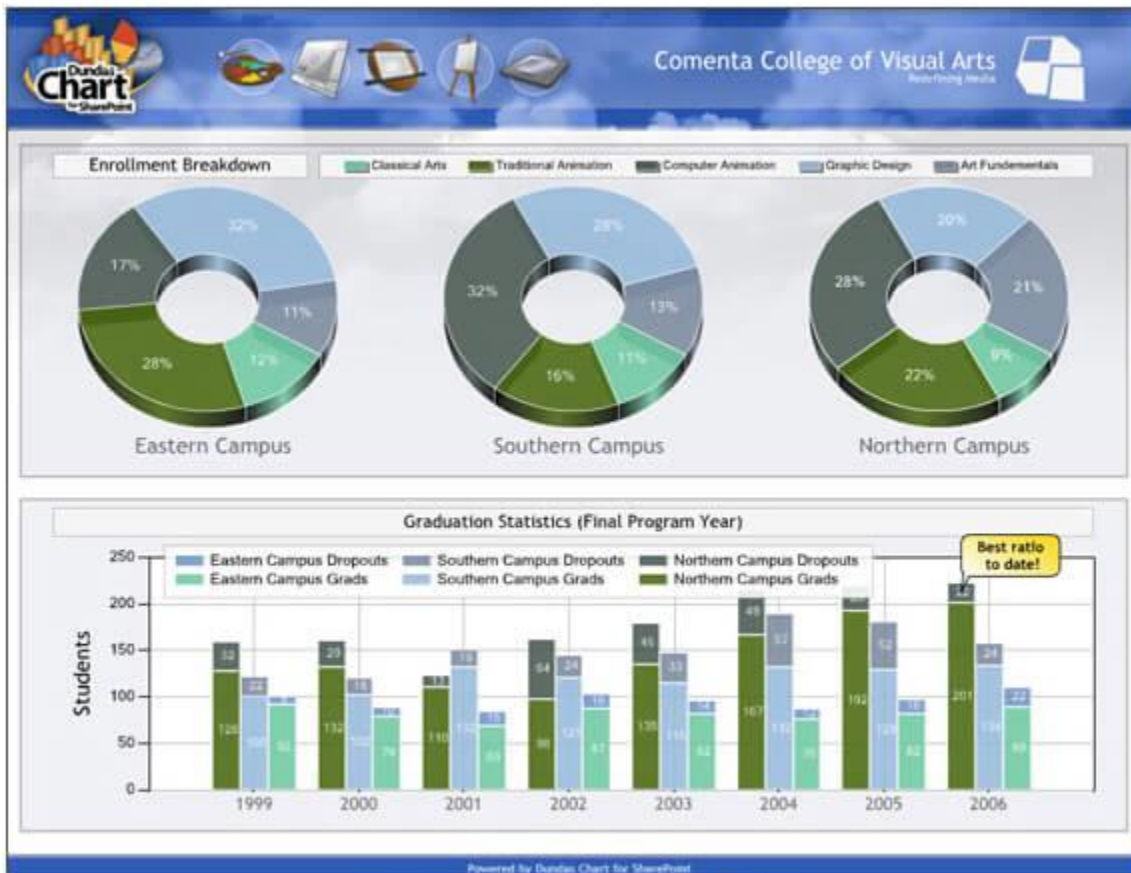

For this dashboard various versions of pie chart are present which are difficult to interpret. Next for various charts either the labels are missing, or they are too simple to explain anything. Another very important thing the makes this dashboard a bad design it that it lacks an element of story, as a user it is very difficult to understand what the dashboard is trying to convey.

This dashboard has a very awkward color scheme which just is conflicting with goal to understand the story of the dashboard.

This dashboard also has pie chart which is not recommended to use. Another thing is that all of these charts do not focus on a single topic, they seem to be random and not constructing any story.

Digital Dashboard, Education Metrics

This dashboard is utilizing many pie charts which is not a good practice and also its color scheme although consistent, but is not very good in terms of color selection.

This dashboard is missing labels which makes it difficult for the user to understand information, moreover the left top charts and bottom right chart is very difficult to interpret, these seem to be offsets of pie charts which is not recommended to use.
