Problem 1: I need to analyze how my freight cost varies with weight with respect to different shipment modes

So, here it is visible that in Air shipment mode our freight cost rises very rapidly as weight increase which is expected. Similarly, Air charter seems to be more spread by here the freight cost rises less steeply and next Truck is more economic (less rise in freight cost with weight) as expected.

Problem 2: Need the impact of dosage form on the first problem

So this tells me that no such open trend in terms of dosage form
