

## Tableau Wrangling – Supply Chain

I am using the `scdf.clean.csv` file to do the wrangling practice in tableau.

- Initially, I have renamed the column names as to remove spaces, and shorten the names to make them more readable.
- Then I have hidden some columns such as ID, Managed By, First.Line.Designation because these columns have either only single unique value, or they are identifiers.
- Then I have created groups for years in PQ.Sent.Client.Date and PO.Sent.Vendor.Date columns.
- I have formatted the values in Manufacturing site and Vendor Name to remove the spaces, commas, hyphens from values, and to shorten the values making them more readable.
